Shadowmatch USA

by Pieter de Villiers

Shadowmatch USA has recently gone live and we are very impressed with what our colleagues in the States are doing. They have created their own website (www.peoplesync.com) and the information they have available on their website is very different to the information on www.shadowmatch.co.za/about. Shadowmatch clients in South Africa with a curiosity to see what they have done, can visit the PeopleSync website.

They have also done some fascinating work to explain the working capabilities of Shadowmatch by means of a range of YouTube videos. Click on this link to see any of the videos they've created: www.youtube.com/peoplesync.

In addition to the USA presence of Shadowmatch, we have also done some work towards creating multiple language worksheets for the international market. We've gone live with French as a first additional language. The market for French speaking clients are primarily in central Africa and we are looking forward to see the first batch of results from the French speaking business communities in central east Africa. Most interesting will be the possible difference in the time aspect of completing a Shadowmatch worksheet in French. Our early gut feeling is that there will be no difference.
